

BOOKING TOOL

TATTOOPLATZ ZÜRICH

Client Side

We are a co-working tattoo studio, where artists can visit and book a station. Currently we have 4 bookable stations (but this should be expandable). Artists need to be able to visit the booking website and choose the number of hours they want to work at the studio. According to this selection, they should then see an availability calendar. This should be presented in a calendar style. Days when the selected slot duration is no longer available should be marked as unavailable.

MON 27	TUE 28	WED 29	THU 30	FRI 1 May	SAT 2	SUN 3
4	5	6	7	8	9	10
11	12	13	14	15	16	17
18	19	20	21	22	23	24
25	26	27	28	29	30	31

On the selected day, they should see a schedule showing how many stations are still free at each time (but without names or other details about the customers who booked those slots).

The times and stations that have not been taken yet should be bookable. They should be able to select a slot of at least 2 hours during our opening hours. In the example picture, we already have four bookings. With a minimum slot duration of 2 hours, the times that should still be available to book (depending on the number of hours they chose) are during the

13:00-18:00 slot and the fully free 10:00-18:00 slot. After selecting the desired slot, they should see two options: finalize the booking or book another session. This option should be visible after booking every (additional) slot.

When finalizing the booking, there should be an option to log in to your customer account. Every booking by a new customer should result in a new customer login and profile being created. Customers should be able to access their account at any time and see a calendar view of their bookings.

Admin Side

There should also be an admin side to the booking page, where we can control what customers can see and access. These include:

- Adjustable studio opening times
- A calendar overview of all bookings
- Move and cancel bookings
- Block out times and days if the studio is not available

Color Scheme

The colors should follow a consistent color scheme:

Primary Color: #FFFFFF

Secondary Color: #000000

Accent Color: #FF66C4

Secondary Color: #F4B6DE
