

HOZIFY USER APPLICATION

1.PROJECT UNDERSTANDING

Hozify User App is a **hyperlocal service booking platform** where:

- Users discover services based on location
- Book services (instant or scheduled)
- Make payments (before or after service)
- Validate service completion using OTP

This is a **transaction + logistics driven system**, not just a listing app.

2.CORE SYSTEM LOGIC (IMPORTANT)

Booking Lifecycle (User Perspective)

Login → Profile Setup → Location Selection →
Service Discovery → Add to Cart → Slot Selection →
Payment Selection → Booking Created → Provider Assigned →
Service Execution → OTP Verification → Booking Closed

3.NAVIGATION ARCHITECTURE

Bottom Navigation:

- Home
 - Bookings
 - Wallet
 - Profile
-

Navigation Flow:

Splash → Login → OTP → Profile Setup → Area Selection → Dashboard

Dashboard → Service → Cart → Slot → Payment → Booking

Bookings → Track Status → OTP → Completion

4.AUTHENTICATION & ONBOARDING FLOW

Step-by-Step Flow:

1. Enter Mobile Number
 2. OTP Verification (6-digit)
 3. Profile Setup (Basic details)
 4. Referral Code (Optional)
 5. Select Area Type:
 - Urban → Proceed
 - Rural → Limited / restricted services
-

UX Notes:

- OTP auto-read
 - Minimal onboarding friction
 - Skip referral option
-

5.LOCATION & SERVICE DISCOVERY

Flow:

- User selects:
 - City
 - Area
 - System logic:
 - If services available → Show services
 - If not → Show “Service Not Available”
-

Features:

- Category listing
 - Sub-service selection
 - Filter-based search
-

6.CART & BOOKING SYSTEM (CORE)

Step-by-Step:

1. Select Service
 2. Select Sub-service
 3. Add to Cart
 4. Go to Cart
-

Cart Features:

- Edit contact details
 - Add service address
 - Select booking type:
 - Instant Booking
 - Slot Booking
-

Slot Logic:

- Minimum 1-hour advance booking
 - Time slot selection UI
-

Invoice:

- Display before payment
-

7. PAYMENT SYSTEM (CRITICAL)

Payment Options:

- UPI
 - Card
 - Net Banking
 - Wallet
 - Pay Later
-

Payment Logic:

Case 1: Pay Later

- Booking created without payment
 - Payment after service
-

Case 2: Online Payment

- Payment before booking confirmation
 - Booking auto-created
-

Case 3: Wallet

- Deduct from wallet
 - Instant confirmation
-

8. BOOKING ALLOCATION SYSTEM

Logic:

- Booking sent to nearby providers
 - Based on:
 - Location
 - Rating
 - Multiple providers receive request
 - Any provider can accept
-

9. SERVICE EXECUTION FLOW

Step-by-Step:

1. Provider accepts booking
 2. Provider visits location
 3. User shares 4-digit check-in code
 4. Service is performed
-

10. OTP VERIFICATION FLOW

Scenario 1: Pay Later

- Service completed

- User selects payment mode:
 - Cash / Online
 - After payment → OTP sent
 - Provider enters OTP → Booking closed
-

Scenario 2: Paid Before Service

- Service completed
 - OTP sent
 - Provider validates OTP
 - Booking closed
-

11.BOOKING MANAGEMENT

Features:

- Booking history
 - Booking status
 - Payment status
-

Status Flow:

Pending → Accepted → In Progress → Completed → Closed

12.WALLET SYSTEM

Features:

- Add money
 - Pay via wallet
 - Transaction history
-

13.NOTIFICATION SYSTEM

Channels:

- SMS
 - WhatsApp
 - Email
-

Triggers:

- Booking confirmation
 - Payment updates
 - OTP alerts
-

14.SOS FEATURE

- Emergency button
 - Quick access help
-

15. REFERRAL SYSTEM

Flow:

- Generate referral code
 - Share with others
 - Earn rewards
-

Onboarding Logic:

- Enter referral code
 - Or skip
-

16. PROFILE & SETTINGS

Features:

- Edit profile
 - Manage addresses
 - Booking history
 - Delete account
-

Account Deletion:

- Permanent removal
 - Restore via support
-

18. API MODULES

- Auth API
 - User API
 - Service API
 - Booking API
 - Payment API
 - Wallet API
 - Notification API
-

19. DATABASE MODULES

- Users
 - Services
 - Bookings
 - Payments
 - Wallet
 - Transactions
 - Referrals
-

20.STATEMENT OF WORK (SOW)

Scope of Work

User App Development:

- Authentication & onboarding
 - Service discovery
 - Booking system
 - Payment integration
 - Wallet
 - Referral
 - SOS
-

Backend Development:

- Booking engine
 - Payment logic
 - Notification system
-

Deliverables:

- User Mobile App
 - Backend APIs
 - Database
 - Deployment
-

23.EDGE CASES (IMPORTANT)

- No services available
 - Payment failure
 - OTP mismatch
 - Provider not arriving
 - Booking cancellation
-

24.FINAL CONCLUSION

The Hozify User App is a **complete, scalable, and transaction-secure system** that ensures:

- Smooth booking experience
- Real-time service execution
- Secure payment handling
- High user engagement
